

Stan Podolski Profile

Stan Podolski

CEO / Cofounder, BleedIO Tech
Chesterbrook, Pennsylvania
BleedIO Tech: 2024-present

Stan Podolski is the cofounder and Chief Executive Officer of BleedIO Tech. He leads company strategy, fundraising, product direction, and partner development across BleedIO's dual-track product strategy: commercially available locMESH and the in-development netMESH platform. He serves as the principal company storyteller for investors, strategic partners, and early lighthouse customers.

At BleedIO, Stan has focused on translating a decentralized wireless-networking thesis into an investable business and a deployable product roadmap. His work spans market positioning, product planning, operator coordination, fundraising materials, and commercial development in smart infrastructure, industrial, defense, and public-safety use cases.

Before BleedIO, Stan served as COO of Elevate AI from 2022 to 2024 and CTO of HundredGraphs from 2019 to 2022. Earlier in his career he built a technical and business foundation that combines physics, finance, and operating leadership, making him well suited to lead an infrastructure company selling into technically demanding enterprise environments.

Highlights

- Leads BleedIO's overall company strategy, product vision, and investor narrative
- Drives fundraising, strategic partnerships, and commercial positioning
- Oversees the transition from pilot-stage traction to repeatable go-to-market execution
- Combines technical training with operator and executive leadership experience

Education

- Rutgers University, MBA, Finance and Business Administration
- Nizhny Novgorod State University, MS, Physics
